What Services Does Family IVF Lahore Offer?

At **Family IVF Lahore**, a wide range of fertility and gynecological services are provided under one roof. These services are tailored to meet the individual needs of each patient and support them at every stage of their fertility journey. Family IVF Lahore+1

IVF (In Vitro Fertilization)

IVF is the primary assisted reproductive technique where eggs are fertilized outside the body and embryos transferred to the uterus. This is ideal for many fertility challenges, including tubal issues, unexplained infertility, and male factor infertility. Family IVF Lahore

IUI (Intrauterine Insemination)

IUI involves placing prepared sperm directly into the uterus to help fertilization occur — especially helpful in cases like mild male infertility or unexplained fertility delays. Family IVF Lahore

ICSI (Intracytoplasmic Sperm Injection)

ICSI involves injecting a single sperm into an egg in the lab, which can improve fertilization rates — especially for male factor infertility. Family IVF Lahore

PGS (Preimplantation Genetic Screening)

PGS supports embryo selection by checking embryos for chromosomal health before transfer, helping improve success outcomes. Family IVF Lahore

Counseling & Personalized Care

Understanding fertility involves both medical and emotional support. Family IVF offers counseling to educate and guide patients through decisions, expectations, and treatment planning. Family IVF Lahore

Gynecological & Diagnostic Services

These include gynecological exams and ultrasounds that help assess reproductive health, catch underlying conditions like endometriosis, and monitor fertility progress. Family IVF Lahore

Accommodation Assistance

The clinic also helps patients from outside Lahore arrange comfortable stays during their treatment at minimal cost, making the fertility journey less stressful. Family IVF Lahore
